

Report formatting in LaTeX tutorial

LfBD Team

Introduction: In this course, you will submit your reports in pdf format. To do this, you will write in the LaTeX document markup language, most conveniently used through overleaf.com. In short, LaTeX is a way to write and format your documents, which gives you many options for presenting quantitative results. You might've seen its signature formatting in many math, statistical modelling, and technical economics papers. Even if these aren't your areas of expertise or interest, it is a great tool for making quantitative reports, and will impress in a professional setting!

Usage:

- 1) Open overleaf.com and create an account
- 2) Create a new blank project

You will see a window similar to this one.

[1] Here, you can find all the files you have in your project. These can be imported figures, images, or other text files containing a different version of your report.

[2] This is the editor window. Here, you can type the text of your answers, create tables, or edit the formatting.

[3] Pay attention to the green “Recompile” window. In LaTeX, the changes to the text you make in the editor window will only show up in [4] after you hit this button.

[4] This is the pdf viewer window. Here, you can see how the resulting pdf will look.

3) If this seems complicated, do not worry! We have prepared a template for your first assignment, so you don’t have to worry about setting up the complicated formatting options. To use it, simply copy the full text of the Assignment 1 text document, and paste it into [2]. Before you do this, make sure that you clear [2] of all text.

Tip: Gen AI is proficient in LaTeX formatting, so if you encounter any problems and do not want to wait for a tutorial to ask questions, you can get a quick solution online.

Congratulations, you know the basics of formatting your report in LaTeX! If you have any additional questions, feel free to ask them at the tutorials.
